

URLflows for Page Pruning: Take Back Your Screen

A private, point-and-click decluttering tool for the modern web

The Reality

Every page has something you'd rather **not look at**.

The Promise

Point at it. Make it disappear. **It stays gone.**

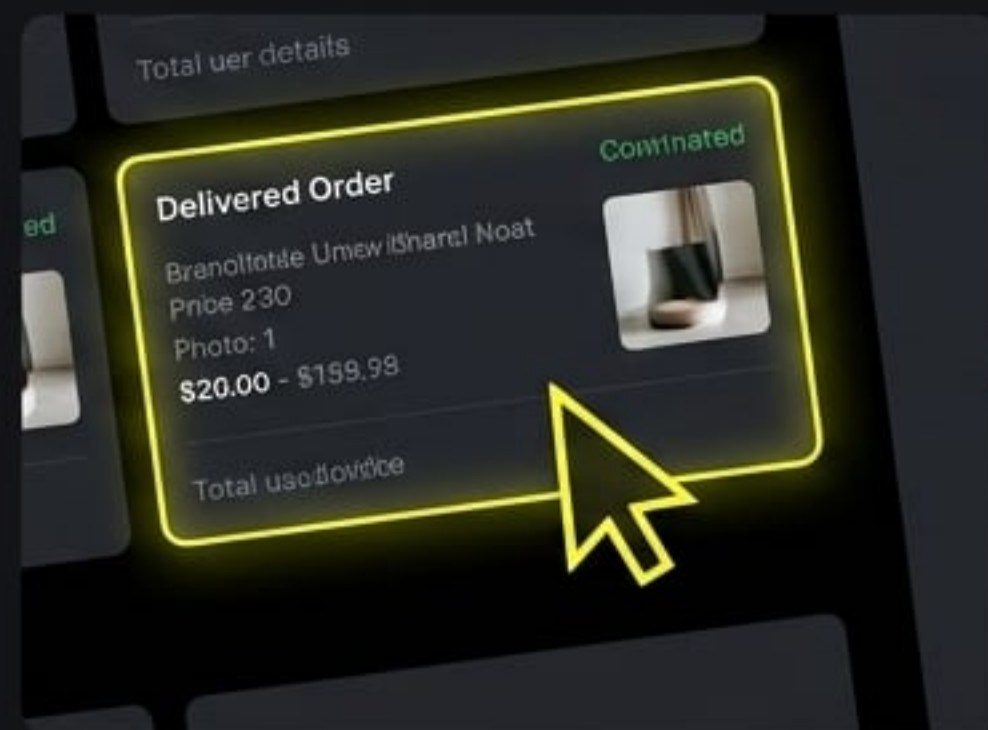

No filter syntax. No rules to write.

The Magic: Point, Click, Prune.

See exactly what you're about to hide before you click.

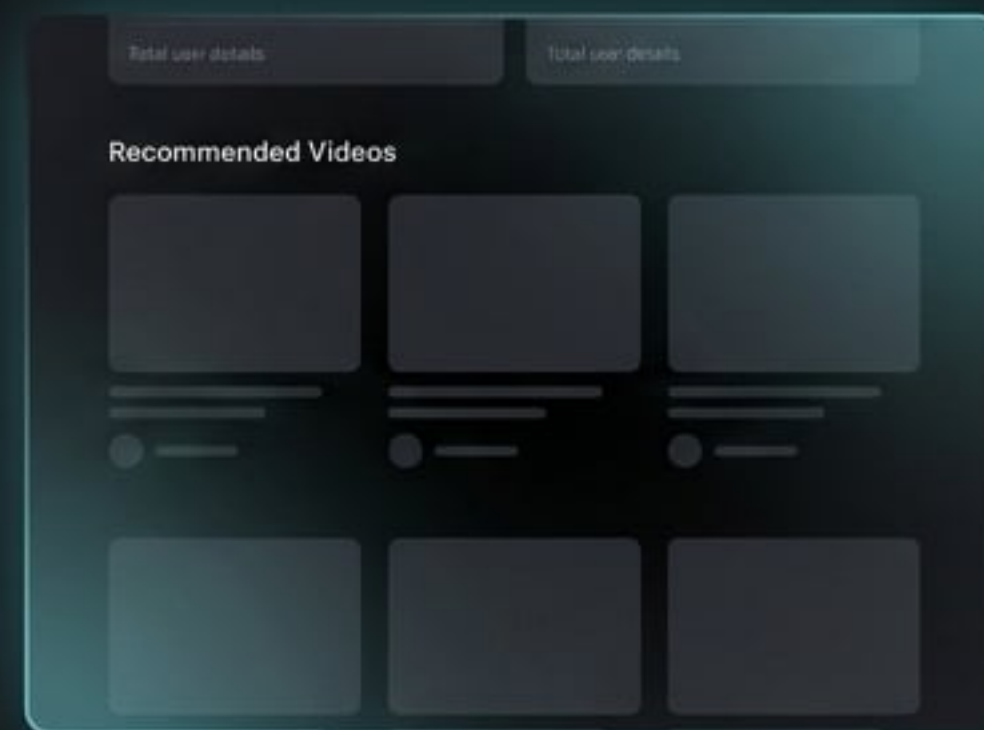

Keep clicking to hide multiple elements, then press Esc to finish.

TARGET

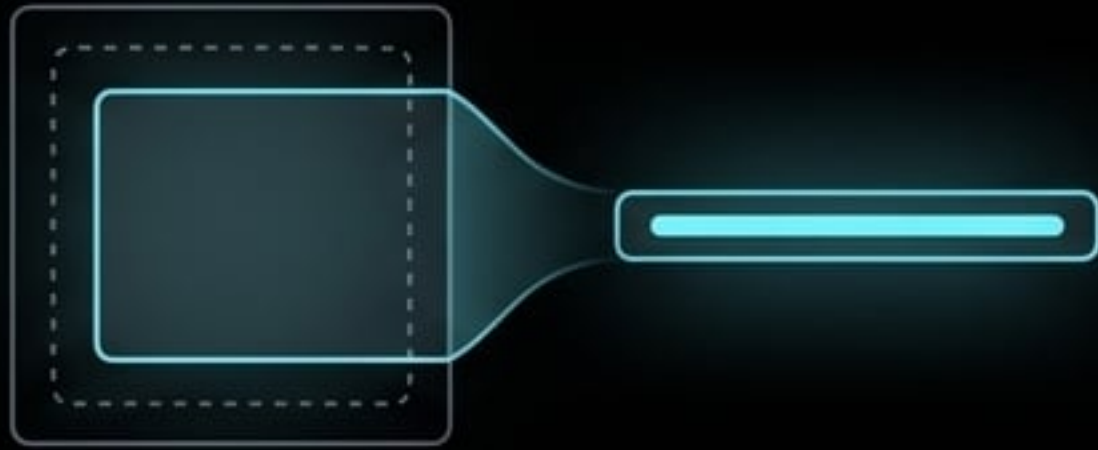

CLICK

COLLAPSE

Under the Hood: Smart Collapsing & Memory.

Smart Collapsing.

Hiding an item doesn't leave an ugly blank gap. URLflows automatically hides the empty container left behind so the page refows neatly.

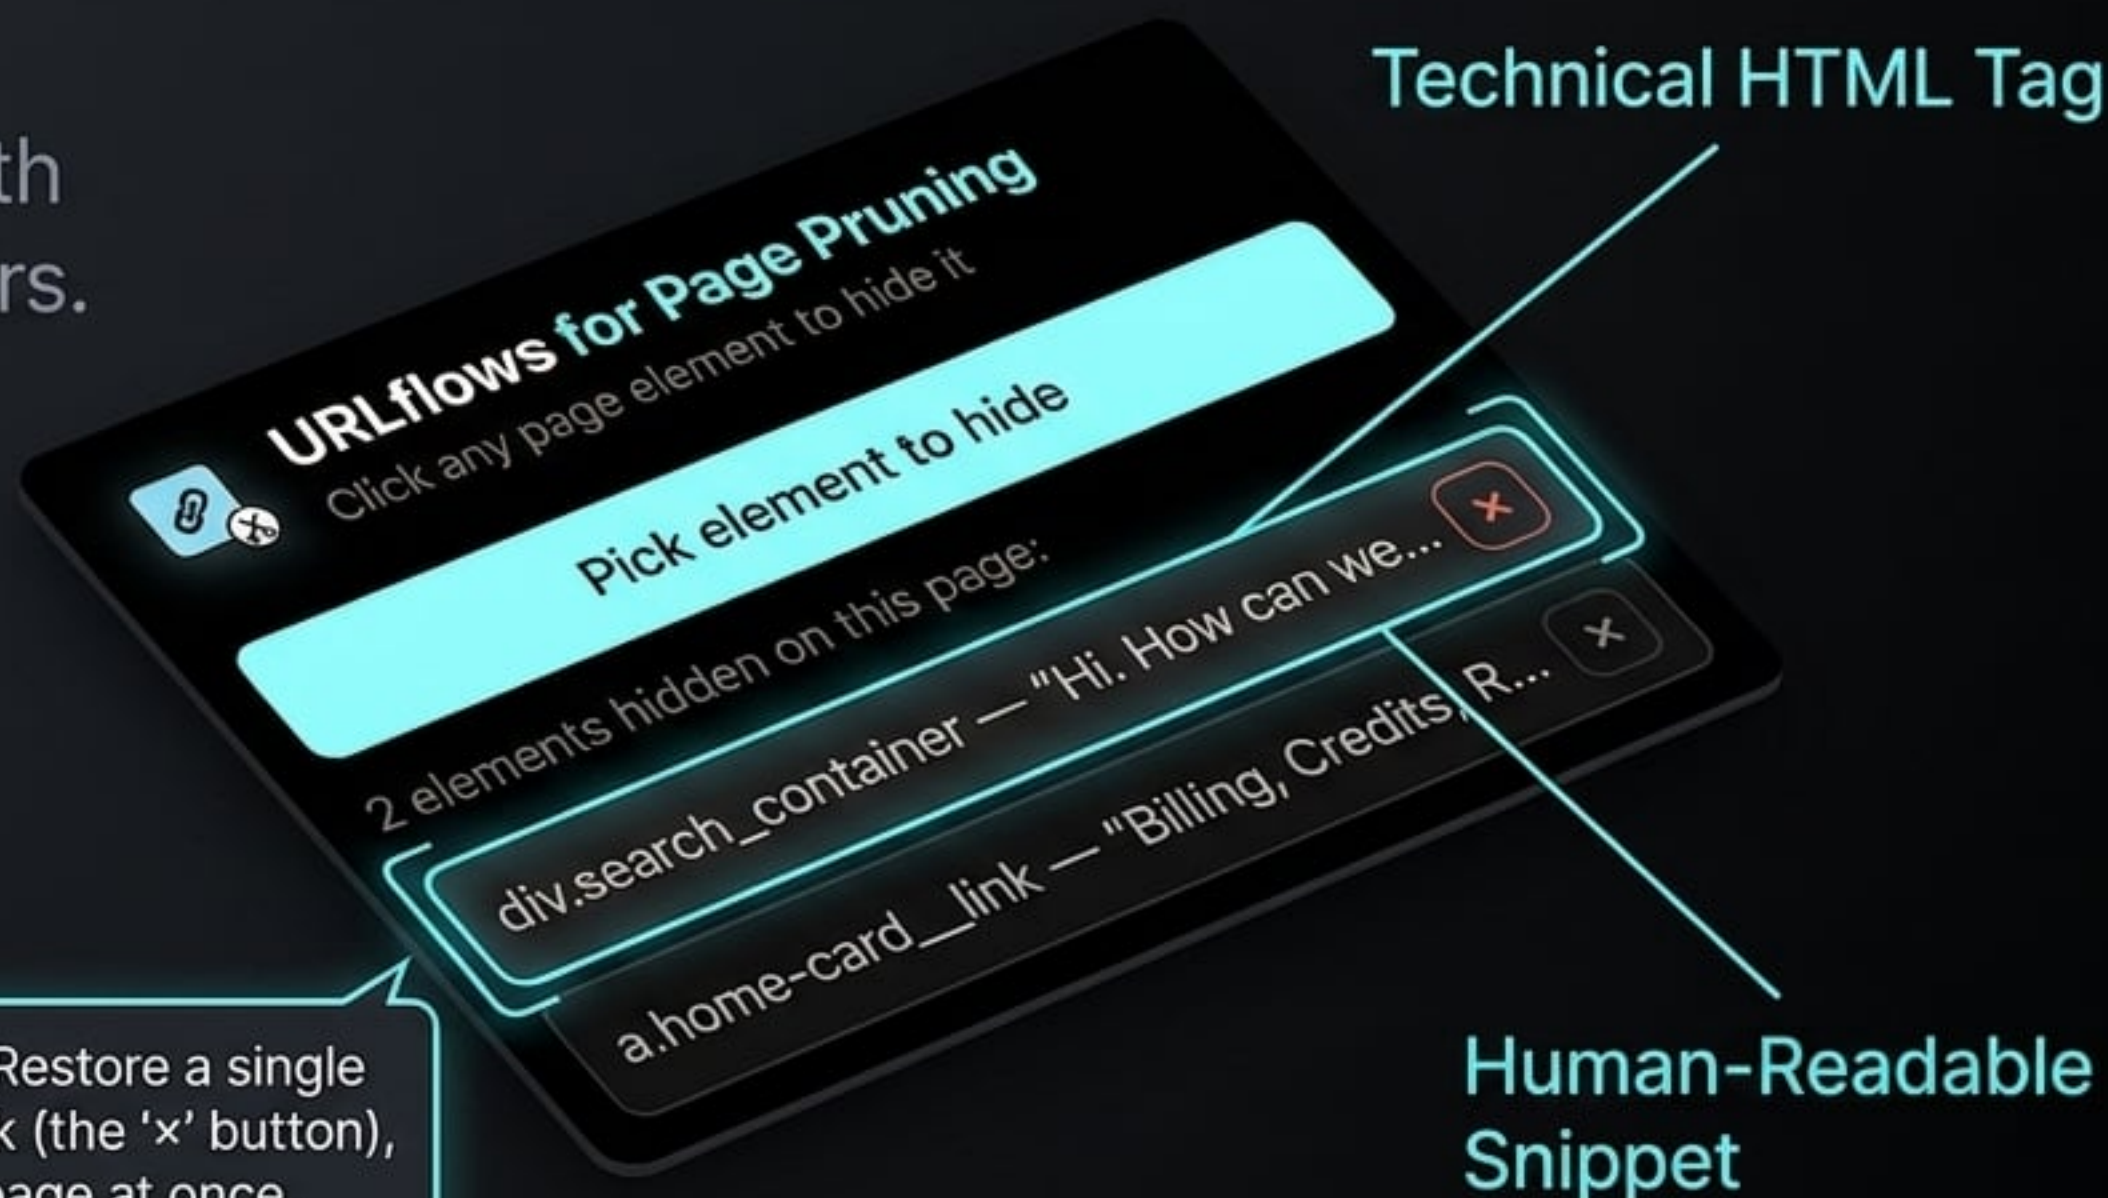

Per-Page Memory.

Your choices are saved for that specific page only. Hiding a sidebar on one article never breaks the rest of the site. Everything stays hidden through reloads and browser restarts.

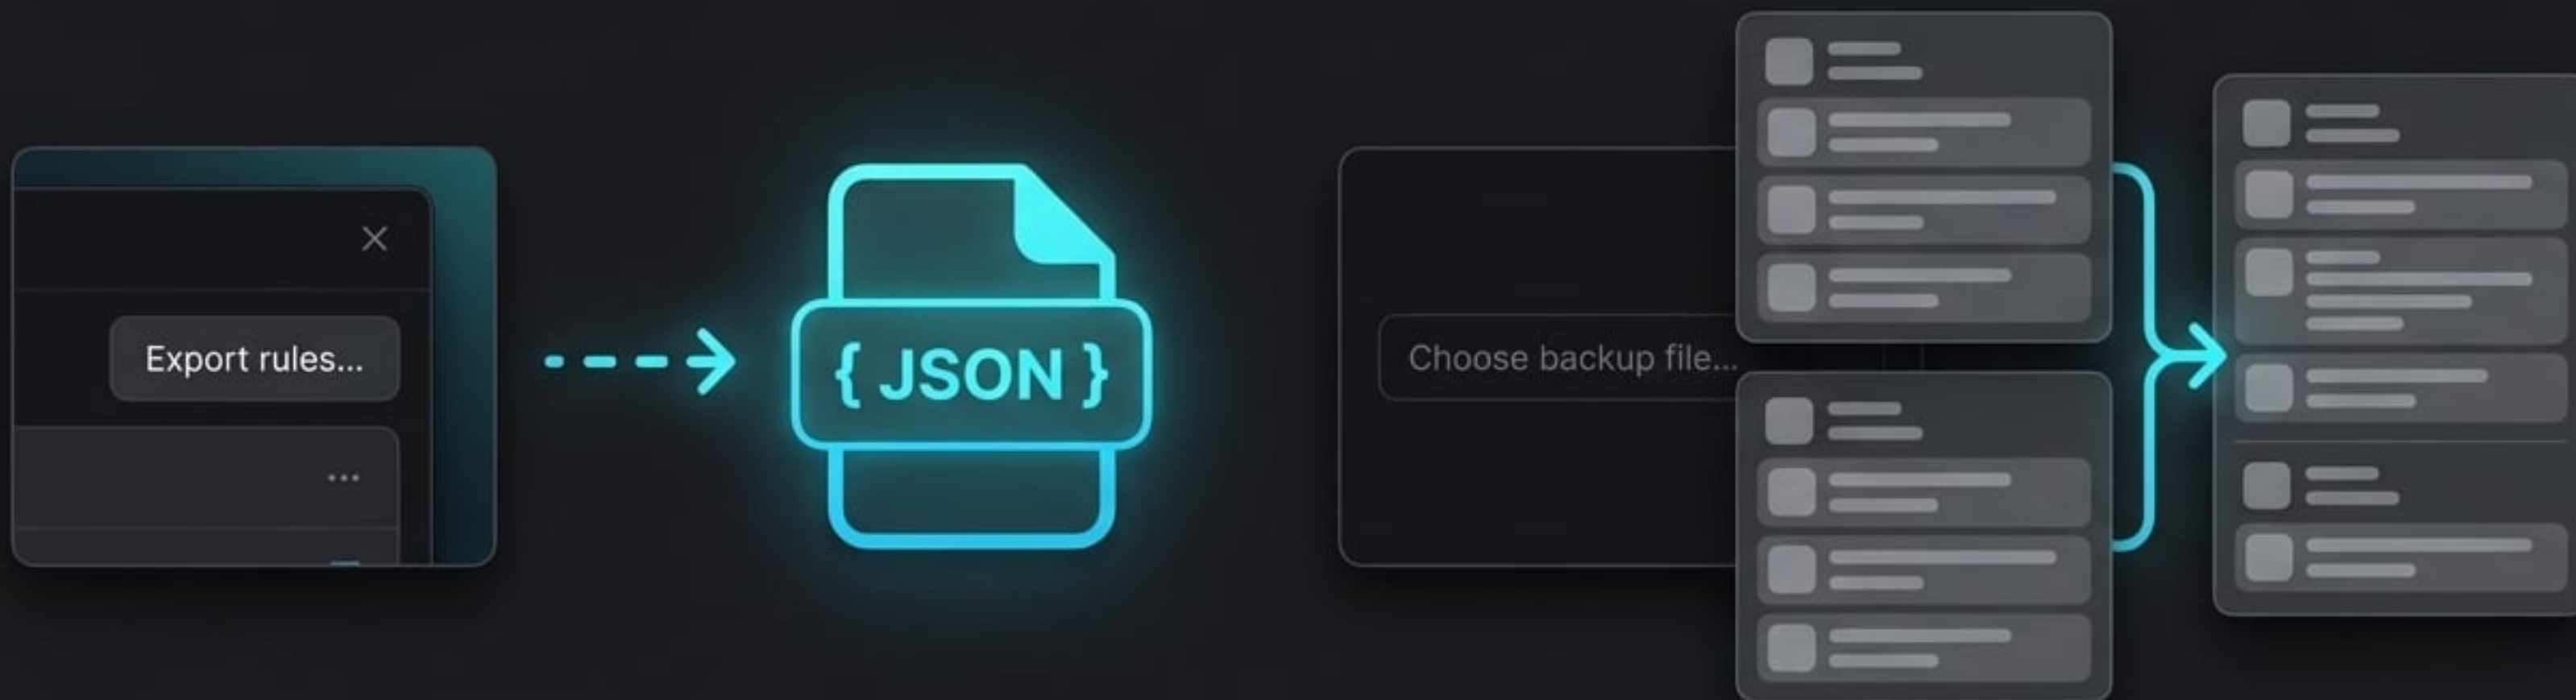

Granular Control: Plain-English Translation.

Most ad-blockers leave you with incomprehensible CSS selectors. URLflows translates code into everyday terms, including a short snippet of the text the element contained.

Changed your mind? Restore a single item with a single click (the 'x' button), or restore the whole page at once.

Ultimate Portability: Backup & Restore.

Download all your rules as a single JSON file to keep as a safety copy or move to another computer.

Importing a backup merges rules with what's already there. Nothing is overwritten, and duplicates are skipped automatically.

The Panic Button.

Freedom to experiment means having a global undo. A single click wipes every rule on every page, putting the web exactly back the way it was.

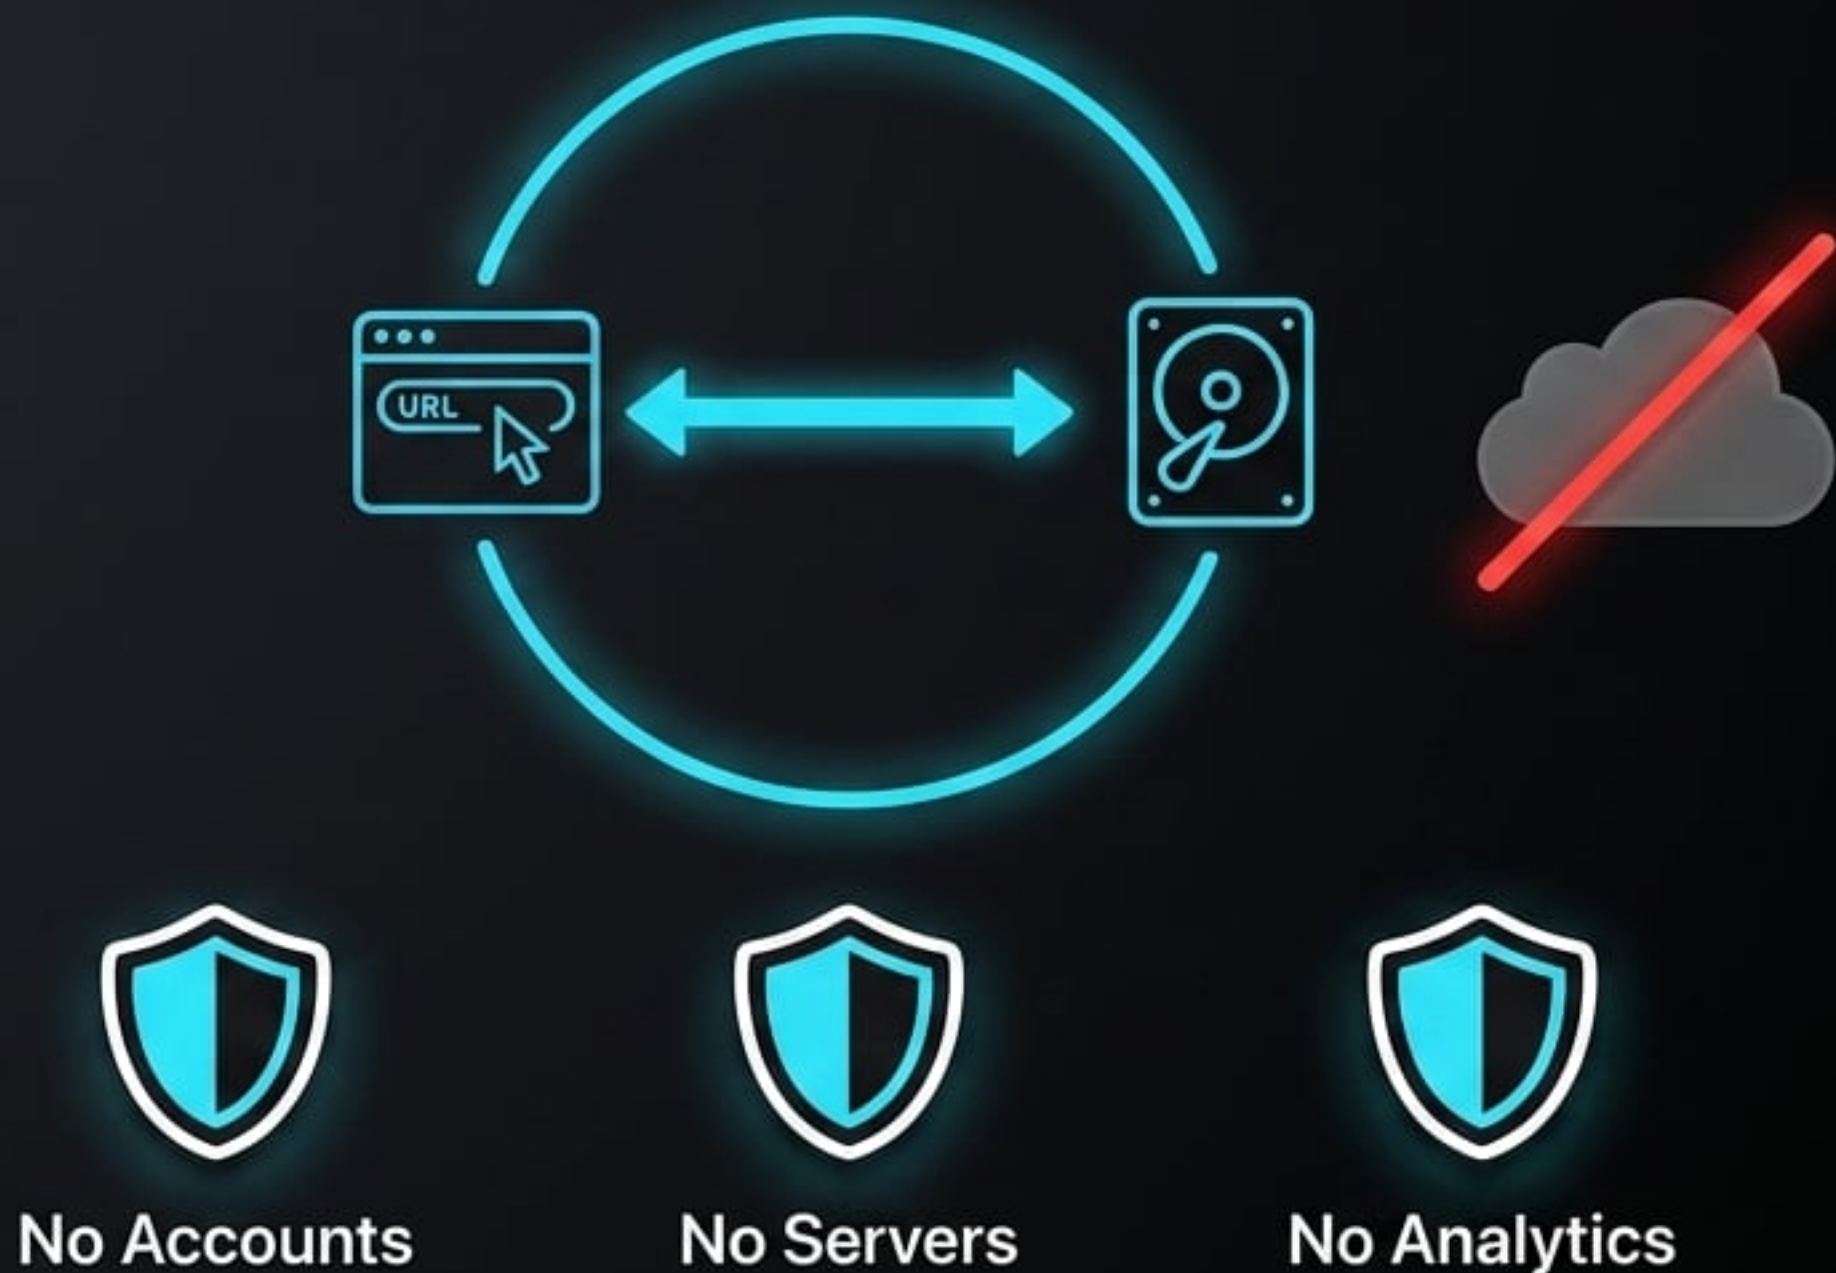

Reset all

Changes take effect instantly across all open tabs—no reloading required.

Private by Design. Zero Tracking Architecture.

URLflows makes absolutely no internet connections. It contains no code capable of sending your data anywhere. Your rules live strictly on your local machine.

Uninstalling the extension deletes everything it ever stored. Your data is yours.

Where URLflows Fits

The precision of developer tools with the point-and-click ease of an ad-blocker.

	URLflows	Traditional Ad Blockers	Chrome Developer Tools
Ease of Use	Point & Click	Requires CSS Syntax	Code interface
Gap Handling	Smart Collapse	Often leaves gaps	Leaves empty boxes
Rule Readability	Plain English	Technical lists	Raw HTML
Permanent Memory	Per-page permanent	Global rules	Resets on reload

Private, free, forever. Take back your screen today.

Available on the Chrome Web Store. Supports all Chromium browsers: Chrome, Edge, Brave, Opera, Arc, and Vivaldi.

Pin it to your extensions menu so a clean web is always one click away.

Once installed, skip the menu entirely. Press Ctrl+Shift+X for Windows, ⌘⇧X for MacOS or customize combination to start pruning instantly.
